

KS3 Unit 53 Cylinders Cones and Spheres

Topic/Skill	Definition/Tips	Example
1. Volume of a Cylinder	$V = \pi r^2 h$	<p>Topic: Geometry and Measures (H)</p>  <p> $V = \pi(4)(5)$ $= 62.8\text{cm}^3$ </p>
2. Volume of a Cone	$V = \frac{1}{3}\pi r^2 h$	 <p> $V = \frac{1}{3}\pi(4)(5)$ $= 20.9\text{cm}^3$ </p>
3. Volume of a Pyramid	$\text{Volume} = \frac{1}{3}Bh$ <p>where B = area of the base</p>	 <p> $V = \frac{1}{3} \times 6 \times 6 \times 7 = 84\text{cm}^3$ </p>
4. Volume of a Sphere	$V = \frac{4}{3}\pi r^3$ <p>Look out for hemispheres – just halve the volume of a sphere.</p>	<p>Find the volume of a sphere with diameter 10cm.</p> $V = \frac{4}{3}\pi(5)^3 = \frac{500\pi}{3}\text{cm}^3$
5. Frustums	<p>A frustum is a solid (usually a cone or pyramid) with the top removed.</p> <p>Find the volume of the whole shape, then take away the volume of the small cone/pyramid removed at the top.</p>	 <p> $V = \frac{1}{3}\pi(10)^2(24) - \frac{1}{3}\pi(5)^2(12)$ $= 700\pi\text{cm}^3$ </p>
6. Surface Area of a Cylinder	<p>Curved Surface Area = πdh or $2\pi rh$</p> <p>Total SA = $2\pi r^2 + \pi dh$ or $2\pi r^2 + 2\pi rh$</p>	 <p> $\text{Total SA} = 2\pi(2)^2 + \pi(4)(5) = 28\pi$ </p>

<p>7. Surface Area of a Cone</p>	<p>Curved Surface Area = $\pi r l$ where $l = \text{slant height}$</p> <p>Total SA = $\pi r l + \pi r^2$</p> <p>You may need to use Pythagoras' Theorem to find the slant height</p>	 <p>$Total SA = \pi(3)(5) + \pi(3)^2 = 24\pi$</p>
<p>8. Surface Area of a Sphere</p>	<p>$SA = 4\pi r^2$</p> <p>Look out for hemispheres – halve the SA of a sphere and add on a circle (πr^2)</p>	<p>Find the surface area of a sphere with radius 3cm.</p> <p>$SA = 4\pi(3)^2 = 36\pi cm^2$</p>
